MERRION GOLD · INTERNAL TOOL

# Pricing Workbook

One screen for live prices, quotes, calculators and company procedures.

**Why it matters.** Counter and phone staff go from *“how much for ten of these bars?”* to a correct, confident number in seconds. It replaces our Google Sheets pricing workbook, keeps its business rules exactly, and adds live spot data, visible price freshness and role-controlled editing.

## What it does today

PRICING WORKBOOK

### Live Price & Buyback for the whole catalogue

About 150 products across gold, silver, platinum and palladium, priced from live spot with premiums, discounts and VAT. Sort, filter, customise columns, search with **/**, and copy rows straight into Outlook or a message. Every spot card shows how fresh the price is, and stale data is never silent.

CUSTOM PREMIUMS

### Pricing control, in managers’ hands

Managers set per-product premiums and discounts, and switch **Weekend, Volatile and Metal Shortage** modes for the whole company at once. Adjustment percentages are tunable per metal group. All edits are enforced server-side and written to an audit log.

TRADE CALCULATOR

### A customer quote in a few clicks

Add products and quantities, flip between **Price** (what the customer pays) and **Buyback** (what we pay), adjust the % per line and get the total. “Message customer” builds a ready-to-send email or WhatsApp reply.

MELT / SCRAP CALCULATOR

### Instant scrap and melt values

Enter weight and category and get the melt value at the current spot. Spot can be edited for a single tool to answer “what if gold hits…?” without changing anyone else’s prices.

PORTFOLIO & CALCULATORS

### Profit, tax and conversions

Portfolio builder shows P&L against purchase price or premium, with target-profit and scenario checks. Built-in VAT, Irish CGT, weight/unit and percentage calculators remove the side spreadsheet.

FROZEN SPOT

### Quote steadily in a moving market

Pin a metal’s spot to a chosen value while negotiating, then resume live with one click. The card is clearly marked so nobody mistakes a frozen price for a live one.

KNOWLEDGE CENTER

### Every procedure, one search away

Approved company SOPs: quoting, payment lock and hedge, collection, buyback, KYC/AML, branch directory, plus step-by-step **Business Central** how-tos. A Price/Buyback guide shows the desk and BC steps side by side. Drafts are labelled, managers approve changes, and every SOP carries a review date with reminders.

AI ASSISTANT

### Ask a question, get a cited answer

Staff ask in plain language and get answers **only from approved SOPs**, with the source section cited. It can also look up live spot and product prices and draft customer email/WhatsApp replies. Daily limits, cost tracking and customer-name scrubbing are built in.

## Built for trust

- **Same numbers everywhere** – one shared pricing engine, rounding that matches the old workbook.
- **Resilient** – if the price feed fails, the last good price is served and clearly flagged.
- **Controlled access** – closed staff-only accounts; admin actions checked on the server, not just hidden in the UI.

**The value in one line:** faster, more consistent quotes; fewer pricing errors; one trusted place for prices, procedures and answers; and a foundation that grows into the rest of the customer journey.
