MERRION GOLD · INTERNAL TOOL

Pricing Workbook

Faster quotes. Consistent prices. Less manual work.

The Pricing Workbook is Merrion Gold's internal tool for quoting Price and Buyback. It replaces the Google Sheets workbook, applies the same business rules, and connects live spot prices, customer messaging, calculators and company procedures in one place. The aim is simple: less time per enquiry, fewer errors, and less reliance on colleagues for routine answers.

Where it saves time

AI ASSISTANT

Customer replies drafted for you

Paste a customer's email and the assistant drafts a reply, as an email or a WhatsApp message, using the current prices. The broker reviews and sends. Replies can also be generated directly from a quote in the Trade tool.

AI ASSISTANT

Procedure questions answered with a source

Staff ask in plain language and receive an answer taken only from approved procedures, with the relevant section cited. Fewer interruptions to managers and colleagues. Usage limits and cost tracking are built in.

LIVE PRICING TABLE

Current prices, no manual updates

About 150 products across gold, silver, platinum and palladium, priced from live spot. Staff can filter, search and copy rows straight into an email. The age of every price is displayed, so out-of-date figures are always visible.

TRADE CALCULATOR

A quote in a few clicks

Select products and quantities, switch between Price and Buyback, adjust the percentage per line, and read the total. Spot can be frozen during a negotiation and released when the conversation ends.

MELT, PORTFOLIO AND TAX TOOLS

Everything on one screen

Melt and scrap values, portfolio profit and loss, VAT, Irish CGT and unit conversions are built in. No separate spreadsheets or calculators are needed during a call.

KNOWLEDGE CENTER

Procedures in one searchable place

Approved procedures for quoting, payment, collection, buyback and compliance, plus step-by-step Business Central guides. Each carries an owner and a review date, so guidance stays current.

Control and consistency for management

- **One change, whole company.** Premiums, discounts and the Weekend, Volatile and Metal Shortage modes are set centrally and apply to every user at once.
- **Same number for every customer.** A single pricing engine and fixed rounding rules remove calculation differences between staff.
- **Accountable.** Pricing changes are restricted to authorised users and recorded in an audit log.
- **Reliable.** If the price feed is interrupted, the last confirmed price remains available and is clearly marked.

In summary: quicker, more consistent quotes, less manual work on customer replies, and one dependable source for prices and procedures.
